VN2700

Your point of difference at the point of sale.

**MEI CASHFLOW
VN2700 Bill Validator**

It's the industry's model bill validator. It boasts roots, reliability, flexibility and performance.

More than 14 years ago, engineers at MEI delivered a payment system to the market that earned a reputation for reliability and performance.

Today, the CASHFLOW VN2700 builds on these roots and delivers even more features and benefits to today's operator. Flexible options, accuracy and high acceptance rate make it the envy of the industry.

Benefit from the ability to accept all bills from \$5 to \$50 AUD. Enable or disable acceptance at the lip of a switch, or with a configuration coupon. Street quality bills are virtually always accepted and jams are a non-issue, as its sensors are non-contact. Its components are modular, and upstacker and downstacker configurations are conveniently available to meet varying machine types.

Beyond these benefits, its long operating life gives it the lowest cost of ownership in the marketplace. With over 3 million installs in the field, it's the validator that vending operators have come to rely on to make a profitable point of difference at the point of sale.
